

problematic skin

Acne affects people of all ethnic groups and can continue well into adulthood, often due to the dysfunction of the pilo-sebaceous gland.

The Nimue Problematic skincare range is scientifically formulated to reduce the build up of excess oil and dead skin cells, normalising the function of cell renewal and reducing inflammation.

nimue
SKIN TECHNOLOGY

A leader in scientific skincare.

skin health prescription

When starting your Nimue Skin prescription you may experience a Transitional Period. This is a temporary skin condition that may occur due to the introduction of specific active ingredients that have a positive effect on the function and structure of the skin.

Continue with your Nimue Skin homecare as prescribed during this Transitional Period in order for the skin's function to normalise and ultimately achieve optimum skin health.
